

★ KEY IMPROVEMENTS

- Improve clarity
- Guide first-time users
- Simplify financial terms
- Increase transparency

① DASHBOARD - FINANCIAL TERMS TOO COMPLEX

Issue: Terms like Net Worth, Unrealised P&L, Cost Basis, Savings Rate may confuse new users.

Impact: Users may not understand the information and may lose trust or engagement.

Recommendation:

- Add info icons ⓘ for all financial terms.
- Show short, simple explanations on hover / tap.
- Use plain language where possible.

② EMPTY STATES - NOT GUIDING ENOUGH

Issue: Empty states only say data is missing but do not guide the user on what to do next.

Impact: First-time users may feel stuck and don't know where to start.

Recommendation:

- Add clear CTA buttons in empty states.
- Show step-by-step starter actions (Add Account / Add Investment / Add Transaction).
- Use encouraging and friendly microcopy.

③ MARKET INFO - NOT PRIORITY

Issue: Market status (NSE, index) is highly visible but may not be the primary need for all users.

Impact: Takes attention away from main financial tasks.

Recommendation:

- Reduce visual weight of market card.
- Move to lower priority area or collapsible section.
- Show only key info by default.

④ NAVIGATION - CAN BE OVERWHELMING

Issue: Too many sections; difference between Portfolio, Holdings, Accounts, Transactions may not be clear for beginners.

Impact: Users may not know where to go.

Recommendation:

- Add short descriptions under menu items (on hover or in help section).
- Group similar sections (Invest / Money / Plan / Learn).
- Consider simplifying for first-time users.

⑤ LACK OF ONBOARDING / FIRST-TIME USER GUIDANCE

Issue: No clear flow to help users set up their financial profile.

Impact: Users may not use the app fully.

Recommendation:

- Add onboarding checklist or setup wizard.
- Show progress bar (e.g., 1 of 4 steps complete).
- Highlight key actions after login.
- Provide sample data option for demo.

⑥ FINANCIAL HEALTH SCORE - NEEDS TRANSPARENCY

Issue: Users don't know how the score is calculated.

Impact: Low trust and uncertainty.

Recommendation:

- Show score breakdown (4 areas with %).
- Add "How is this calculated?" info section.
- Explain methodology in simple words.

⑦ NET WORTH SECTION - NEEDS CONTEXT

Issue: Net worth shown as ₹0.00 with no context for new users.

Impact: Users may not understand what net worth includes.

Recommendation:

- Add small text: "Total of your assets minus liabilities."
- Show components (Cash + Investments - Liabilities) when data available.
- Add tooltip or learn more link.

⑧ DATA VISUALIZATION - CAN BE STRONGER

Issue: Charts and graphs are minimal.

Impact: Harder for users to understand trends.

Recommendation:

- Add trend indicators (↑/↓) with %.
- Use more visual charts for portfolio performance, cash flow.
- Allow date range comparison.
- Use color coding (green = gain, red = loss).

⑨ ACTION VISIBILITY - GOOD BUT CAN IMPROVE

Issue: "+ New Transaction" is good, but other key actions are not as visible.

Impact: Users may miss important actions.

Recommendation:

- Highlight key actions contextually.
- Use secondary CTAs like "Add Investment", "Link Bank", "Set Budget".
- Show quick actions on dashboard.

⑩ PRIVACY & CLARITY - GOOD BUT ENHANCE

Issue: "Hide amounts" is good, but not obvious for new users.

Impact: Users may not discover the feature.

Recommendation:

- Add short note: "Hide all amounts on this device".
- Remember preference per user.
- Add lock / biometric access option.

OVERALL SUMMARY

- ✓ Make the app easier to understand for beginners.
- ✓ Guide users with onboarding and clear next steps.
- ✓ Simplify financial language with explanations.
- ✓ Improve transparency and build user trust.
- ✓ Prioritize key information and actions.
- ✓ Use data visualization to show insights clearly.

KHAZANA - UX/UI REVIEW (MAJOR ISSUES)

18 Aug 2026

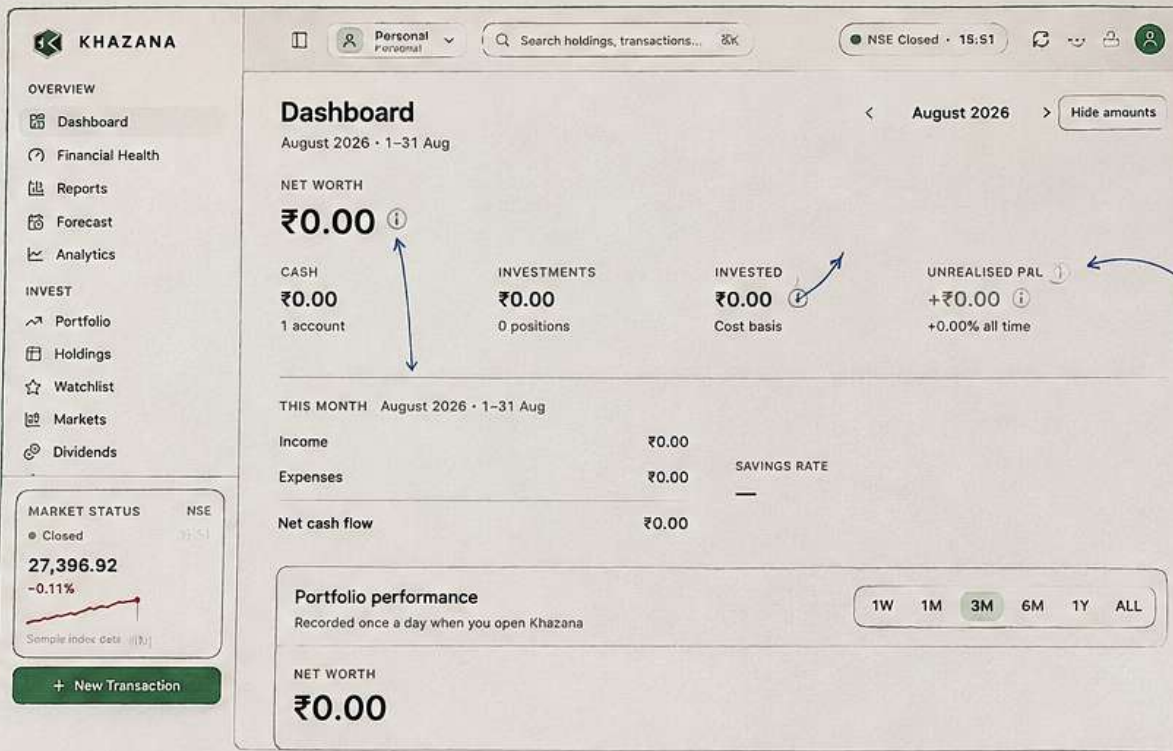

① TOO MUCH JARGON / NOT BEGINNER FRIENDLY

Terms like Net Worth, Unrealised P&L, Cost Basis, Holdings etc. may confuse new users.

Add tooltip / info icon ⓘ with simple explanation.

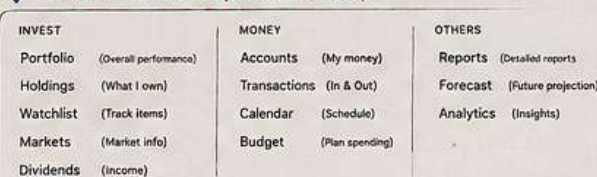

③ MARKET INFO - HIGH VISIBILITY BUT PRIMARY FOR ALL USERS

NSE status & index is useful but may not be the first thing every user wants to see. Consider making it secondary or collapsible.

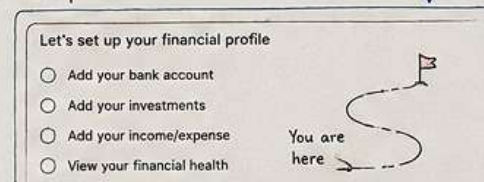

④ NAVIGATION - CAN BE OVERWHELMING

Too many sections. Difference between Portfolio, Holdings, Accounts, Transactions may not be clear to beginners. Add short descriptions / tooltips.

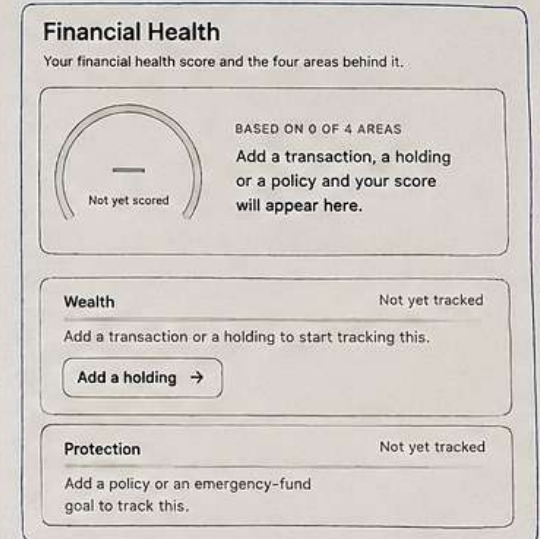

⑤ LACK OF ONBOARDING / FIRST-TIME USER GUIDANCE

No clear flow to help users set up their financial profile. Add onboarding checklist or setup wizard.

② EMPTY STATES - NOT GUIDING ENOUGH

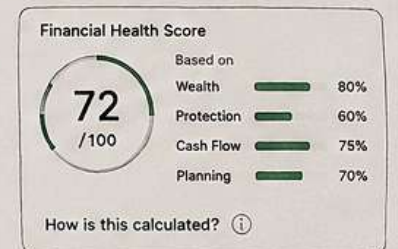

Shows that data is missing but doesn't tell user what to do first. Add clear next steps with CTA.

⑥ FINANCIAL HEALTH SCORE - NEEDS TRANSPARENCY

Users will ask: How is this score calculated?

Add info about methodology.

OVERALL RECOMMENDATIONS

- Simplify financial terms with tooltips and examples.
- Improve empty states with clear actions.

- Guide new users with onboarding.
- Make important actions more obvious.
- Provide transparency for scores & data.

PRIORITY (High → Low)

- Empty states & Onboarding
- Jargon / Tooltips
- Financial Health Transparency
- Navigation Clarity
- Market info visibility
