

---

YOUR WEALTH. YOUR VAULT.

# The complete interface.

Every screen of the Khazana web client, drawn from the shipped token system and populated with the demo vault — alongside the foundations, the component library, and the interaction behaviour that hold them together.

**28**

screens, both themes

**2**

themes — Vault &amp; Ledger

**7**

mobile frames at 390px

**1**

demo vault, ₹2.19 Cr

**100% private**

No server. No tracking.

**Encrypted**

AES-256 at rest. PIN never leaves the device.

**Offline first**

Works everywhere. No internet required.

|   |              |                                                                                   |    |
|---|--------------|-----------------------------------------------------------------------------------|----|

Page numbers are the sheet they open on. Part C runs in sidebar order — Overview, Invest, Money, Protect, More — and every screen appears twice, Vault (dark) then Ledger (light), on facing sheets.

THE PREMISE

Khazana ships two clients — a Flutter app and this Next.js web app — over one token system. **This document specifies the web client**, whose 28 routes are a superset of the Flutter app's 24.

Nothing here is a screenshot. Every artboard is redrawn from the same design tokens the app compiles, so a value in this document and a value in `globals.css` cannot disagree — a build-time check asserts it.

TWO NAMED THEMES

**Vault**

The dark theme. Four surface levels, borders instead of shadows.

**Ledger**

The light theme. One subtle shadow; cards are the brightest surface.

Only colour changes between them. Spacing, type, sizing and layout are identical — which is why one artboard source renders both frames in this document.

THE GOVERNING RULE

**Emerald = interaction.**

**Gold = identity.**

Gold carries the mark and wealth-flavoured moments and is never a button colour. Making gold the interaction colour is what turns a premium product into a gold-painted generic one.

Every screen sheet in Part C has the same three parts: a **frame label**, the **artboard**, and an **annotation rail**. Callout badges are anchored inside the mockup itself, so a number always sits on the thing it describes.

SCALE

Desktop artboards are drawn at their true **1440 px** width and printed at **82%** to leave room for the annotation rail. Every measurement quoted in this document is the **true** value, never the printed one. Mobile artboards are printed 1:1 at **390 px**.

TRUNCATION

A frame shows the screen's composition down to a fixed artboard height, the way a Figma frame does. Lists that continue below the cut are shown with their real leading rows — the count in the rail states the full number.

LEGEND

- 1** **Frame label.** Screen name, platform, theme, and the route it serves.
- 2** **Artboard.** The redrawn screen on its true theme canvas, clipped to the frame.
- 3** **Callout badge.** Anchored to an element, not floated over a coordinate.
- 4** **Annotation rail.** Purpose, numbered notes, and a spec table of the values that matter.

CONVENTIONS

|                 |                             |
|-----------------|-----------------------------|
| Currency        | INR, en-IN grouping         |
| Figures         | tabular numerals throughout |
| Compact form    | ₹1.2Cr · ₹1.2L · ₹90k       |
| Untracked value | renders “—”, never 0        |
| Frame size      | 1440 × 940 desktop          |
| Mobile size     | 390 × 844                   |

DATA

Every figure in every frame comes from the demo vault in `lib/sampleData.ts` — the same one the Settings screen loads. Net worth ₹5.24 Cr, 24 holdings, 3 accounts, 3 liabilities, 3 policies, 5 goals, 91 days of snapshots. Part F prints it in full.

Not investment advice

Figures shown are demonstration data for interface design. The product's own narrative engine carries the same disclaimer and a banned-phrases list that keeps generated copy out of advice territory — see Part E.

PART A

# Foundations

Colour, charts, type, space, radius, elevation, motion, layout and brand — the tokens every artboard in this document is assembled from, with the reasoning that fixed each value.

- Colour
- Chart palette
- Typography
- Space · radius · elevation · motion
- Layout & grid
- Brand

VAULT — THE DARK THEME

|                                                                         |                                                                          |                                                                    |                                                                                |                                                                           |                                                                          |

### Emerald = interaction. Gold = identity.

Gold carries the mark and wealth - flavoured moments. It is deliberately never a button colour — making gold the interaction colour is what turns a premium product into a gold - painted generic one.

FOUR SURFACE LEVELS

Jumping from near - black straight to a bright card is what makes dark UI look flat. Vault steps evenly instead:

THE GOLD TEXT EXCEPTION

|                                                |                                                |
|------------------------------------------------|------------------------------------------------|
| <b>--gold on card</b><br>3.9:1 — graphics only | <b>--gold-ink on card</b><br>5.2:1 — body text |
|------------------------------------------------|------------------------------------------------|

On Vault, gold already reads 9.4:1, so --gold-ink resolves to the same value. The token exists so no call site has to know which theme it is in.

SUCCESS IS THE INTERACTION COLOUR

A gain and a primary action share one emerald, by decision. The cost is that a profit figure and a button read alike; the benefit is one unambiguous brand green instead of two competing ones.

CATEGORICAL SERIES — FIXED ORDER

ASSET GROUPS — 14 TYPES COLLAPSE TO 7

Fourteen categorical hues cannot be kept colourblind-safe, so the asset types roll up to seven groups with a fixed render order. Charts must never sort these slices by value.

RESERVED NEUTRAL

An instrument the bundled master does not cover takes the neutral, never a series colour. A grey slice reads as “not known”; a coloured one reads as a real category.

THE SAME ALLOCATION, BOTH THEMES

Series colours are fixed hexes, not tokens — a slice must not change identity when the theme does. What changes around them is the track, the legend ink and the 1px separator between arcs, all of which resolve from the theme.

WHY THE ORDER IS FROZEN

The sequence was validated with a six-check dataviz pass in **both** themes. Reordering it breaks the guarantee, because the checks are on **adjacent** pairs — which slices touch is what a reader actually has to separate.

|                                 |                 |           |
|---------------------------------|-----------------|-----------|
| Worst adjacent pair, protanopia | $\Delta E$ 8.1  | $\geq 8$  |
| Normal-vision floor             | $\Delta E$ 18.2 | $\geq 15$ |
| Contrast on both grounds        | all $\geq 3:1$  | pass      |
| Series count                    | 8               |           |
| Asset groups                    | 7               |           |

THE AMBER THAT WAS DROPPED

The original brief listed an amber slice beside gold. Under normal vision they are  $\Delta E$  14.8 apart — below the 15 floor — so no reader could separate those two slices. The amber was removed rather than shipped as a near-duplicate.

CHART COLOUR IS NEVER THE ONLY CUE

Every coloured mark in the product is paired with a label, a glyph or a sign: donuts carry a legend, deltas carry an arrow, diverging bars carry a centre rule. Colour is the fast read, never the only one.

|                                                                |                              |                                         |
|----------------------------------------------------------------|------------------------------|-----------------------------------------|
| <div>display</div> <div>48/56 · 700 ·<br/>−0.04em</div>        | Portfolio value ₹2,41,38,144 | Reserved for the cover and hero moments |
| <div>h1</div> <div>32/40 · 700 ·<br/>−0.03em</div>             | Portfolio value ₹2,41,38,144 | Page title — PageIntro                  |

| <div>h4 / bodyLarge</div> <div>16/24 · 600 ·<br/>−0.01em</div> | Portfolio value ₹2,41,38,144 | Emphasised body                         |
| <div>body</div> <div>14/22 · 400 ·<br/>−0.006em</div>          | Portfolio value ₹2,41,38,144 | The default — 14px, not 16px            |
| <div>small</div> <div>13/20 · 400 ·<br/>−0.006em</div>         | Portfolio value ₹2,41,38,144 | Dense rows, buttons                     |
| <div>caption</div> <div>12/18 · 400 · 0</div>                  | Portfolio value ₹2,41,38,144 | Sub-labels, hints                       |
| <div>eyebrow</div> <div>10.5/14 · 700 ·<br/>0.1em</div>        | Portfolio value ₹2,41,38,144 | Uppercase overline above a figure       |

NUMERALS

TABULAR — THE DEFAULT

₹2,41,38,144

₹1,11,11,111

₹9,99,99,999

Digits share one advance width, so a column of figures aligns without a monospace face. Set globally on body.

PROPORTIONAL — WHAT IT WOULD LOOK LIKE

₹2,41,38,144

₹1,11,11,111

₹9,99,99,999

The 1s narrow and the column ragged-edges. In a finance product that is not a nicety — it is a misread waiting to happen.

ONE FAMILY

**Inter** across both clients — bundled as four static weights in Flutter, loaded with the optical-size axis on web. There is no second display face: a display serif is reserved for marketing, and shipping one for six letters of wordmark would cost a font request for nothing.

WEIGHTS IN USE

**400**      Regular — body

**500**      Medium — labels

**600**      Semibold — emphasis, buttons

**700**      Bold — headings, figures

NEGATIVE TRACKING

Display, h1 and h2 tighten (−0.04 to −0.025em). Inter at large sizes reads loose by default, and a headline that has not been tracked in is the clearest tell of an untuned interface. Body text takes a much smaller −0.006em; anything more hurts at 14px.

FONT FEATURES

|                      |                    |
|----------------------|--------------------|
| font-variant-numeric | tabular-nums       |
| Features             | tnum · cv01 · ss01 |
| Rendering            | optimizeLegibility |
| Smoothing            | antialiased        |
| Base size            | 14px               |
| Base line height     | 1.5                |

THE 8PT GRID

Nine steps, all multiples of four. Layout constants are drawn from them rather than typed per screen: card padding 20, card gap 16, section gap 32, page padding 40 desktop / 16 mobile.

RADIUS IS PRESCRIBED PER COMPONENT

“Everything is a giant rounded rectangle” is the generic look this system avoids: a button is tighter than a card, a card is tighter than a modal.

ELEVATION IS THEME-SPECIFIC

**VAULT — BORDERS, NO SHADOWS**

A drop shadow on a near-black canvas is invisible, and faking depth with a glow is what makes finance UI look like a crypto exchange.

Only true overlays get one — `---shadow-3`.

**LEDGER — ONE SUBTLE SHADOW**

The page is #F5F7F5 and the card is #FFFFFF, so a card is the brightest surface. That one step gives depth before a shadow is involved.

Hover lifts to `---shadow-2` and `-2px`.

MOTION — ONE CURVE, THREE DURATIONS

**cubic-bezier(0.4, 0, 0.2, 1)**

One easing curve for the entire product. Standard material easing: quick to leave, slow to settle. A second curve buys nothing and costs consistency.

**150ms**  
`---dur-fast`  
Colour, border, opacity

**250ms**  
`---dur`  
Transform, layout

**400ms**  
`---dur-slow`  
Entrance, chart draw

REDUCED MOTION

Under `prefers-reduced-motion` every duration collapses to 0.001ms and the hover lift is removed outright. Nothing is merely shortened — the transform itself is dropped.

DESKTOP SHELL

COLLAPSED RAIL

BREAKPOINTS

| WIDTH        | NAVIGATION           | PAGE PADDING | NOTABLE                                                                              |
|--------------|----------------------|--------------|--------------------------------------------------------------------------------------|
| < 720px      | Bottom bar, 5 tabs   | 16px         | Topbar drops search and market pill; calendar becomes one column with a bottom sheet |
| 720 – 899px  | Bottom bar + drawer  | 16px         | Market pill and portfolio selector return                                            |
| 900 – 1023px | Sidebar, 248px       | 32px         | Bottom bar retires; sidebar toggle appears                                           |
| ≥ 1024px     | Sidebar or 76px rail | 32px         | Inline search field with ⌘K                                                          |
| ≥ 1560px     | Sidebar or rail      | 32px         | Content well stops growing and centres                                               |

THE SIDEBAR CARRIES EVERY ROUTE

All twenty-six destinations are in the sidebar — a test asserts it. At twenty-plus a flat list stops being scannable, so five groups answer “what am I trying to do”: look at it, grow it, spend it, protect it, everything else.

ICONOGRAPHY

|             |                         |
|-------------|-------------------------|
| Set         | Lucide                  |
| Box         | 24 units                |
| Stroke      | 2px, round cap and join |
| Nav size    | 16.5px                  |
| Action size | 15–17px                 |
| Colour      | currentColor            |

THE LOCKUP

SIZES IN USE

The mark is the supplied artwork — a rendered gold hexagon with a keyhole and a K — not a redrawn approximation. Because it is raster it is used at 24px and above; below that the bevel and keyhole stop resolving, so the favicon set is pre-composited on the Vault plate at each exact size rather than scaled in the browser.

WORDMARK

Set in Inter at **0.22em** tracking, uppercase, 700. The tracking is what carries the identity — which is why a separate display face was not worth shipping for six letters.

STRINGS

|         |                          |

| Name    | Khazana                  |
| Title   | Khazana — Private Wealth |
| Tagline | Your wealth. Your vault. |
| Bundle  | com.khazana.app          |

USER - SELECTABLE ACCENTS

Five accents replace the emerald interaction colour on request. Each ships a light and a dark step so contrast holds in both themes; gold is never among them, because gold is identity and identity is not a preference.

|                                                                                       |                                                                                       |                 |                   |
|---------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|-----------------|-------------------|
|  |  | <b>Emerald</b>  | #1B7F52 · #34C98A |

|  |  | <b>Garnet</b>   | #A83A45 · #E0707C |

PART B

# Components

The primitive kit every screen is assembled from — each specimen shown on both theme canvases, with the states, measurements and reasoning behind it.

Buttons · chips · controls

Surfaces · forms · feedback

Figures · tables · lists

Charts

BUTTON — THREE VARIANTS, NOT FIFTEEN

STATES

CHIP — SIX TONES

DELTA — DIRECTION CARRIED TWICE

SEGMENTED CONTROL

WHY THREE

**Primary** — emerald fill, the one action a screen most wants. **Secondary** — bordered, everything else. **Ghost** — no chrome, tertiary and in-table. soft and danger are kept as aliases so forty existing call sites did not have to change in one commit: soft maps to secondary, and danger is secondary tinted rather than a fourth shape.

EMERALD IS THE INTERACTION COLOUR

Gold never lands on a button. On Vault the fill is #20C98A with near-black ink at 9.4:1; white on that emerald would be 2.4:1.

|            |                              |
|------------|------------------------------|
| Height     | 36px                         |
| Padding    | 0 14px                       |
| Radius     | 9px                          |
| Type       | 13px / 600 / -0.01em         |
| Icon gap   | 8px                          |
| Transition | 150ms standard               |
| Active     | translateY(1px)              |
| Disabled   | opacity 0.4, no press        |
| Focus ring | 2px canvas + 2px accent-line |

DELTA CARRIES AN ARROW

Colour alone fails for a colourblind reader and in print, so the glyph repeats the information: ↑ up, ↓ down, · flat. A null value renders an em dash in muted ink — never a zero, which would assert a fact the vault does not have.

CHIP TONES ARE SEMANTIC

Each tone is a soft background, a matching ink, and a border mixed from the same token at 26–30% — so a chip holds its shape on any of the four surface levels.

CARD, SECTION HEADER, EYEBROW

INPUTS

PROGRESS — ONE ZONE RULE EVERYWHERE

BANNER

THE CARD

One surface, one radius, one padding. `padded={false}` exists because the previous version hard-coded `p-5` and callers fought it with `p-0` — a table or a divided list owns its own padding.

|            |                                   |
|------------|-----------------------------------|
| Padding    | 20px                              |
| Radius     | 14px                              |
| Border     | 1px - -line                       |
| Shadow     | none (Vault) · 0 1px 2px (Ledger) |
| Hover lift | -2px + shadow -2, opt-in          |

FIELDS

|            |                          |
|------------|--------------------------|
| Height     | 38px                     |
| Radius     | 10px                     |
| Padding    | 0 12px                   |
| Border     | 1px - -line-strong       |
| Background | - -surface               |
| Label      | 12px / 600 - -ink-soft   |
| Hint       | 11.5px - -muted          |
| Focus      | accent border + 3px ring |

PROGRESS ZONES

Under 70% success, 70–90% warning, over 90% danger — derived from the fraction, never stored. The same function drives budget tiles, credit utilisation, coverage gaps and the transactions rail, so two bars showing the same ratio can never disagree.

BANNERS ARE NOT TOASTS

They sit in the layout and persist. Nothing important in this product is announced by something that disappears on a timer.

ONE CARD, DIVIDED

The KPI row is a single card split by hairlines, not four cards. Four separate cards read as four sections and compete with the real sections below them.

|              |                                 |
|--------------|---------------------------------|
| Cell padding | 16px 20px                       |
| Label        | 10.5px / 700 / 0.1em, uppercase |
| Figure       | 22px / 700 / -0.035em           |
| Sub          | 11.5px - - muted                |
| Divider      | 1px - - line                    |
| Overflow     | ellipsis, never wrap            |

TABLE RULES

|              |                        |
|--------------|------------------------|
| Header       | 9.5px / 700 / 0.11em   |
| Body         | 12.5px                 |
| Row padding  | 10px 12px 10px 0       |
| Row rule     | 1px - - line           |
| Numerics     | right-aligned, tabular |
| First column | left-aligned           |
| Wrapping     | none — truncate        |

AVATARS

A monogram plate, not a logo. Two letters at 700 on —fill, 11px radius at 32px and above, 9px below. Tinted by semantics where the type matters — success wash for income, violet for transfers.

TRUNCATION IS DELIBERATE

Every cell truncates rather than wraps. A table whose rows change height as data changes cannot be scanned, and in a ledger scanning is the whole job.

EMPTY STATE

SHARED RULES

Every chart takes its colours from tokens, draws its grid from `--grid-line`, and labels its axes in `--muted` at 10.5px. None of them renders a tooltip through the `title` attribute — an OS tooltip waits a second, is styled by the platform, and never appears on a touch screen at all.

|                 |                   |
|-----------------|-------------------|
| Donut thickness | 18–22px           |
| Donut gap       | 0.014 rad         |
| Donut track     | --fill-strong     |
| Area stroke     | 2px, non-scaling  |
| Area fill       | 26% → 0% gradient |
| Grid lines      | 3, at 25/50/75%   |
| Column width    | 12px              |
| Column radius   | 4px top           |
| Column gap      | 2px               |
| Bar height      | 9px               |
| Ring stroke     | 9–11px, round cap |
| Gauge sweep     | 240°              |
| Gauge stroke    | 15px              |
| Band arc        | 3.5px at 30%      |

ORDER, NOT SORTING

Asset-group donuts render in the fixed group order. Sorting slices by value would reshuffle which hues sit adjacent, and adjacency is exactly what the colourblind validation was run against.

ENTRANCE

Lines draw in via `stroke-dashoffset`, bars grow from the baseline via `scaleY`, rings and gauges animate `stroke-dashoffset` over 600ms. All are suppressed entirely under reduced motion — see Part E.

PART C

# Screens

All twenty-eight routes the web client serves, each drawn twice — Vault then Ledger — and populated with the demo vault. The order is the sidebar's, because that is the order a user meets them in.

SAME ARTBOARD, OTHER THEME

This is the identical mockup source as the preceding sheet with one class changed. Spacing, type, sizing and layout are byte-identical; only the palette resolves differently.

WHAT CHANGES

|             |                           |
|-------------|---------------------------|
| Canvas      | #080D0B → #F5F7F5         |
| Card        | #151E1A → #FFFFFF         |
| Hairline    | #26342E → #DCE4DF         |
| Body text   | #F4F7F5 → #101613         |
| Interaction | #20C98A → #087A56         |
| Elevation   | borders only → 1px shadow |

WHY THE EMERALD DARKENS

#20C98A on a white card reads 2.1:1 — unusable for text or a small mark. Ledger steps the same hue down to #087A56 (5.6:1) and pairs it with white, while Vault keeps the bright step against near-black ink at 9.4:1. The two are the same brand colour at the lightness each background can carry.

## WHAT THIS SCREEN IS FOR

The accounting view. Twelve months of income against spending, where the money went, and a balance sheet assembled from the double-entry postings rather than from summed transactions.

## ANNOTATIONS

- 1 Savings rate.** is income less spending over income, on the same window as the figures beside it — never a different period, which is the usual way this number lies.
- 2 Two-series columns.** Income and expenses share a group with a 2px gap; the surface showing through is the separator, so no third colour is introduced.
- 3 Balance sheet.** Built from postings, and the header states whether assets less liabilities less equity nets to zero within ₹0.005. Transfers never appear here — they are not income or expense, and the ledger keeps them out.

## SPEC

WHAT THIS SCREEN IS FOR

The investment home. Six headline figures, then allocation read three ways, the extremes of the book, and every position in one table. The route keeps its old / investments path because it is one of the five Flutter tabs — only the label moved.

ANNOTATIONS

1

**Six KPIs, not seven.** Portfolio screens answer value, cost, total return and today's return first; count and quantity are context, so they sit last.

2

**Three donuts, one grammar.** Asset group keeps the fixed palette order; sector and profit-split may sort by value because both are labelled in the legend beside them.

3

**Diverging P&L.** Sign is the message, so the bars grow from a centre rule rather than from a left edge — magnitude and direction in one read.

4

**Holdings table.** Numeric columns are right-aligned and tabular so digits line up column-wise; only the instrument column is left-aligned.

SPEC

|                 |                      |
|-----------------|----------------------|

SAME ARTBOARD, OTHER THEME

This is the identical mockup source as the preceding sheet with one class changed. Spacing, type, sizing and layout are byte-identical; only the palette resolves differently.

WHAT CHANGES

|             |                           |
|-------------|---------------------------|
| Canvas      | #080D0B → #F5F7F5         |
| Card        | #151E1A → #FFFFFF         |
| Hairline    | #26342E → #DCE4DF         |
| Body text   | #F4F7F5 → #101613         |
| Interaction | #20C98A → #087A56         |
| Elevation   | borders only → 1px shadow |

WHY THE EMERALD DARKENS

#20C98A on a white card reads 2.1:1 — unusable for text or a small mark. Ledger steps the same hue down to #087A56 (5.6:1) and pairs it with white, while Vault keeps the bright step against near-black ink at 9.4:1. The two are the same brand colour at the lightness each background can carry.

WHAT THIS SCREEN IS FOR

The data grid, split out of Portfolio so the analysis screens stay readable. Filter, sort and page through every position with its classification and weight.

ANNOTATIONS

- 1

Toolbar above the grid. Search, type filter and sort state sit inside the card, not in the page header — they belong to the table, and moving with it keeps them findable when the page scrolls.
- 2

Unclassified is a real state. A market-cap band the instrument master does not cover renders “—” in muted ink, never an invented guess.

SAME ARTBOARD, OTHER THEME

This is the identical mockup source as the preceding sheet with one class changed. Spacing, type, sizing and layout are byte - identical; only the palette resolves differently.

WHAT CHANGES

|             |                           |
|-------------|---------------------------|
| Canvas      | #080D0B → #F5F7F5         |
| Card        | #151E1A → #FFFFFF         |
| Hairline    | #26342E → #DCE4DF         |
| Body text   | #F4F7F5 → #101613         |
| Interaction | #20C98A → #087A56         |
| Elevation   | borders only → 1px shadow |

WHY THE EMERALD DARKENS

#20C98A on a white card reads 2.1:1 — unusable for text or a small mark. Ledger steps the same hue down to #087A56 (5.6:1) and pairs it with white, while Vault keeps the bright step against near -black ink at 9.4:1. The two are the same brand colour at the lightness each background can carry.

2

Why prices are typed

Khazana never calls a market data feed on its own. A price is here because you entered it, or because you pasted a broker export. That is the whole privacy contract: no request leaves the device carrying a list of what you own.

Add a price provider

Settings → Market data lets you supply your own API key. The key is stored in the OS keychain, never in the vault.

Open market data settings

WHAT THIS SCREEN IS FOR

Instruments tracked but not owned, with a target price and the distance to it. Prices are hand-entered; nothing on this screen calls out to a market feed.

ANNOTATIONS

- 1

**To target** reuses the Delta component. A negative distance means the price has passed the target — the arrow says so without the reader parsing the sign.
- 2

**The privacy panel is design, not documentation.** Explaining the missing live feed on the screen that most invites the question is what stops it reading as a broken feature.

## Session

|            |           |
|------------|-----------|
| Exchange   | NSE       |
| Status     | Open      |
| Local time | 14:28 IST |
| Closes     | 15:30 IST |
| Advancing  | 31        |
| Declining  | 19        |

⚠ These levels are generated

The session clock is real; the numbers are deterministic demonstration data, hashed from the symbol and the date. Nothing is fetched.

## WHAT THIS SCREEN IS FOR

Index levels and the day's movement across your book. The only screen in the product that shows figures Khazana generated rather than figures you entered — which is why the demonstration badge sits in the page header, not in a footnote.

## ANNOTATIONS

- 1 Demo badge in the title row.** Warning tone, always visible, never dismissible on this screen. Synthesised numbers that look like a live feed are the most damaging thing a finance UI can ship quietly.
- 2 Day change never blends.** If one real previous close exists in the vault, every synthesised day change is dropped rather than mixed with it.
- 3 The session clock is real.** Market hours come from the device, so "open" is true even though the level beside it is not.

Sep

Bars past today are the announced payouts, drawn in the neutral fill so a forecast can never be mistaken for a receipt.

WHAT THIS SCREEN IS FOR

Income from holdings — what has landed, what has been announced, and the yield that implies against the portfolio's market value.

ANNOTATIONS

- 1

Received vs announced.

Two chip tones and two bar fills.

A forecast never borrows the success colour, because a number you might get and a number you have are not the same fact.
- 2

Yield is on market value,

not on cost — stated in the sub-label so the basis is never ambiguous.

Estimates, not filings

Unrealised positions only, FIFO lots, no set-off against carried-forward losses. Informational only — not tax advice.

WHAT THIS SCREEN IS FOR

What the book would cost in capital-gains tax if it were realised today, position by position, under the India FY25 rules bundled with the app.

ANNOTATIONS

1

Long / short is computed, not chosen.

Holding period against the per-asset-type threshold decides the term; the chip states which side each position fell on.

2

Slab-rated positions

show “Slab” rather than a number, because the rate depends on income the app does not know. Inventing 30% here would be a confident wrong answer.

3

The rules panel is versioned.

Schema version and effective date are on screen, so a figure can always be traced to the rule set that produced it.

Estimates, not filings

Unrealised positions only, FIFO lots, no set-off against carried-forward losses. Informational only — not tax advice.

SAME ARTBOARD, OTHER THEME

This is the identical mockup source as the preceding sheet with one class changed. Spacing, type, sizing and layout are byte-identical; only the palette resolves differently.

WHAT CHANGES

|             |                           |
|-------------|---------------------------|
| Canvas      | #080D0B → #F5F7F5         |
| Card        | #151E1A → #FFFFFF         |
| Hairline    | #26342E → #DCE4DF         |
| Body text   | #F4F7F5 → #101613         |
| Interaction | #20C98A → #087A56         |
| Elevation   | borders only → 1px shadow |

WHY THE EMERALD DARKENS

#20C98A on a white card reads 2.1:1 — unusable for text or a small mark. Ledger steps the same hue down to #087A56 (5.6:1) and pairs it with white, while Vault keeps the bright step against near-black ink at 9.4:1. The two are the same brand colour at the lightness each background can carry.

A transfer is neither income nor expense. Budgets and Reports are blind to these rows by design.

WHAT THIS SCREEN IS FOR

Where money is held. Balances come from double-entry postings, not from summing transactions — which is what lets a transfer move value without inventing income.

ANNOTATIONS

1

**Balance is derived.** Opening balance plus postings. If the postings were ever missing, every account here would read as its opening balance — the Diagnostics screen checks for exactly that.

2

**Account cards, not rows.** Three accounts fit as cards and each carries its own actions; the pattern degrades to a table past about eight.

3

**Transfers are violet.** Neither income green nor expense red, because a transfer is neither — and Budgets and Reports ignore them entirely.

WHAT THIS SCREEN IS FOR

The ledger. One timeline over expenses, income and transfers, grouped by day with a running net per day, plus the budget strip and the capture queue alongside.

ANNOTATIONS

1

**Day headers carry the day's net.** Scanning a month is a sequence of daily nets; making the reader add rows to get there is the most common failure of a transaction list.

2

**Category avatars are tinted by type** — success wash for income, violet for transfers, neutral fill for spending — so the type is legible before the amount is read.

3

**Signs, not just colour.** A plus or a minus precedes every amount, because colour alone fails for a colourblind reader and in print.

SAME ARTBOARD, OTHER THEME

This is the identical mockup source as the preceding sheet with one class changed. Spacing, type, sizing and layout are byte-identical; only the palette resolves differently.

WHAT CHANGES

|             |                           |
|-------------|---------------------------|
| Canvas      | #080D0B → #F5F7F5         |
| Card        | #151E1A → #FFFFFF         |
| Hairline    | #26342E → #DCE4DF         |
| Body text   | #F4F7F5 → #101613         |
| Interaction | #20C98A → #087A56         |
| Elevation   | borders only → 1px shadow |

WHY THE EMERALD DARKENS

#20C98A on a white card reads 2.1:1 — unusable for text or a small mark. Ledger steps the same hue down to #087A56 (5.6:1) and pairs it with white, while Vault keeps the bright step against near-black ink at 9.4:1. The two are the same brand colour at the lightness each background can carry.

38

## WHAT THIS SCREEN IS FOR

The same ledger on a month grid. Useful for the question a list answers badly — when in the month does money actually leave.

## ANNOTATIONS

- 1 Cells carry both figures.** Income above expense, compact form, tabular. A single net number per day would hide a heavy day that happened to balance.
- 2 Future days are dimmed to 42%,** not hidden — the shape of the month stays intact while nothing suggests data exists where it does not.
- 3 Below 600px** the grid collapses to a single column and the day detail becomes a bottom sheet; the desktop layout keeps it as a persistent right-hand panel.

## SPEC

|                |                      |
|----------------|----------------------|
| Cell           | 96px h, 10px radius  |
| Grid gap       | 6px                  |
| Week start     | Monday               |
| Today          | accent border + wash |
| Future opacity | 0.42                 |

Each entry listed here would close the gap on its own. The app names candidates; it never ticks anything for you.

WHAT THIS SCREEN IS FOR

Tick entries against a bank statement until the cleared balance matches. The one workflow in the product that proves the book is true.

ANNOTATIONS

- 1

**Four figures, one relationship.** Opening, cleared, book, difference — laid out in the order the arithmetic runs, so the KPI strip reads as an equation.
- 2

**The difference is a warning, not an error.** An unreconciled account is normal; colouring it red would train the user to ignore red.
- 3

**Candidate explanations.** The app lists entries that would each close the gap alone. It names them and stops — ticking is always the user's action.

WHAT THIS SCREEN IS FOR

Rules that repeat — rent, EMI, subscriptions, salary — with what each costs annually and what falls due next.

ANNOTATIONS

- 1 Annualised committed spend is the figure this screen exists to surface. A ₹649 subscription is invisible monthly and ₹7,788 a year.
- 2 Date blocks, not date strings, in the upcoming list: number over month, tabular, so the column scans as a calendar.
- 3 Committed vs discretionary reframes the same money as a ratio — the reading that actually changes behaviour.

## SAME ARTBOARD, OTHER THEME

This is the identical mockup source as the preceding sheet with one class changed. Spacing, type, sizing and layout are byte-identical; only the palette resolves differently.

## WHAT CHANGES

|             |                           |
|-------------|---------------------------|
| Canvas      | #080D0B → #F5F7F5         |
| Card        | #151E1A → #FFFFFF         |
| Hairline    | #26342E → #DCE4DF         |
| Body text   | #F4F7F5 → #101613         |
| Interaction | #20C98A → #087A56         |
| Elevation   | borders only → 1px shadow |

## WHY THE EMERALD DARKENS

#20C98A on a white card reads 2.1:1 — unusable for text or a small mark. Ledger steps the same hue down to **#087A56** (5.6:1) and pairs it with white, while Vault keeps the bright step against near-black ink at 9.4:1. The two are the same brand colour at the lightness each background can carry.

HDFC Credit Card

2%

WHAT THIS SCREEN IS FOR

Loans and credit cards with their real carrying cost, plus a local payoff simulator that compares avalanche against snowball ordering.

ANNOTATIONS

1

Average rate is balance-weighted. A simple mean of 42%, 8.6% and 9.4% would say 20% and be useless — the ₹48 L home loan dominates, and the figure says so.

2

High APR is flagged on the account, and the same fact applies a ×0.85 factor inside the health score's debt-load metric. One condition, two consistent consequences.

3

Utilisation uses the budget zone colours, so a credit card reads with the same grammar as a spending envelope.

SPEC

WHAT THIS SCREEN IS FOR

Policies held, what each covers, when each renews, and the two gaps the app can actually compute — life and health — against rules stated on screen.

ANNOTATIONS

1

Renewals inside 30 days become a danger chip on the policy itself, and the same window drives the notification menu in the topbar.

2

Gap rules are printed beside the bars. “10 × annual income” is a stated assumption a reader can disagree with, not a black-box target.

3

Untracked ≠ uncovered. Vehicle and home cover are absent from the gap panel rather than shown at zero, and the note says why.

WHAT THIS SCREEN IS FOR

A read-only readiness reading over four weighted components — emergency fund, life cover, health cover and retirement assets. The one screen with no actions at all.

ANNOTATIONS

1

No buttons, deliberately. Every component is owned by another screen. Adding “fix this” actions here would duplicate those flows and put the user two places at once.

2

Every target traces to income. Six months of expenses, ten times income, half of income — the annual-income KPI is in the strip so the basis of all four is visible.

3

Coverage caps at 100%. Being over-insured does not buy a higher score, so a component cannot inflate the total past its weight.

SPEC

SS

Financial health

Strong — 92% of the inputs are tracked

Now 3M 6M 1Y

1

72

Strong

financial health score

One score over four weighted categories. Anything the vault cannot see is **untracked, not zero** — the weights renormalise over what is known, and the grade is withheld entirely below 50% tracked weight.

2

Bands

|            |        |
|------------|--------|
| Excellent  | 85–100 |
| Strong     | 70–85  |
| Fair       | 55–70  |
| Needs work | 40–55  |
| At risk    | 0–40   |

Bands are drawn faintly on every gauge track so a score has a scale, not just a number.

3

78

Wealth

weight 30%

**Net-worth trajectory** 12 pts  
Up 22% across the 90-day window

**Invested share** 10 pts  
89% of assets invested — target 40%

**Concentration** 8 pts  
Largest group is 93% of the portfolio

71

Protection

weight 25%

**Emergency fund** 10 pts  
7.3 months of expenses — target 6

**Life cover** 8 pts  
₹3.00Cr against a ₹3.42Cr target

**Health cover** 7 pts  
₹20.00L against a ₹17.10L floor

69

Efficiency

weight 25%

**Savings rate** 10 pts  
28% of income retained — target 30%

**Debt load** 10 pts  
One APR above 24% applies a ×0.85 factor

**Budget adherence** 5 pts  
4 of 5 budgets within limit

74

**Goal pace** 7 pts  
5 goals tracked, 2 ahead of schedule

**Growth allocation** 5 pts  
Equity and gold at 95%

4

🛡️ Informational only — not investment advice

The score is a summary of what this vault contains. It is not a rating, it is not shared with anyone, and it never leaves the device.

## WHAT THIS SCREEN IS FOR

The financial health score and the twelve metrics behind it, each with the points it contributes and the sentence that explains its current reading.

## ANNOTATIONS

- 1 **Every point is accounted for.** Four categories at 30/25/25/20, twelve metrics summing to their category weight. A score with no visible derivation is a horoscope.
- 2 **The trend is the score's own history**, taken from the daily snapshots rather than recomputed — so the line matches whatever the score was on the day.
- 3 **Category rings, not bars.** Same component as Goals at 74px, which keeps “progress towards a whole” one visual idea across the product.
- 4 **The disclaimer is a component**, not a footnote in small print, and it names the privacy property alongside the legal one.

Financial health

Strong — 92% of the inputs are tracked

Now3M6M1Y

1

72

Strong

financial health score

One score over four weighted categories. Anything the vault cannot see is **untracked, not zero** — the weights renormalise over what is known, and the grade is withheld entirely below 50% tracked weight.

11 May

Informational only — not investment advice

The score is a summary of what this vault contains. It is not a rating, it is not shared with anyone, and it never leaves the device.

SAME ARTBOARD, OTHER THEME

This is the identical mockup source as the preceding sheet with one class changed. Spacing, type, sizing and layout are byte-identical; only the palette resolves differently.

WHAT CHANGES

|             |                           |
|-------------|---------------------------|
| Canvas      | #080D0B → #F5F7F5         |
| Card        | #151E1A → #FFFFFF         |
| Hairline    | #26342E → #DCE4DF         |
| Body text   | #F4F7F5 → #101613         |
| Interaction | #20C98A → #087A56         |
| Elevation   | borders only → 1px shadow |

WHY THE EMERALD DARKENS

#20C98A on a white card reads 2.1:1 — unusable for text or a small mark. Ledger steps the same hue down to #087A56 (5.6:1) and pairs it with white, while Vault keeps the bright step against near-black ink at 9.4:1. The two are the same brand colour at the lightness each background can carry.

Undo

Every import is one batch. Undo removes exactly the records that batch created — nothing you have edited since.

WHAT THIS SCREEN IS FOR

Bulk entry from a broker or bank export. Three steps — choose a source, preview every parsed row, confirm — with an undo that is scoped to the batch.

ANNOTATIONS

- 1

**Preview is the whole feature.** The result of each row is stated before anything is written: new, updates existing, or rejected with the reason.
- 2

**Rejections are shown, not dropped.** A symbol missing from the instrument master fails loudly here rather than appearing later as an “Unclassified” slice.
- 3

**Undo is per batch.** It removes exactly the records that import created and leaves anything edited since alone.

SAME ARTBOARD, OTHER THEME

This is the identical mockup source as the preceding sheet with one class changed. Spacing, type, sizing and layout are byte-identical; only the palette resolves differently.

WHAT CHANGES

|             |                           |
|-------------|---------------------------|
| Canvas      | #080D0B → #F5F7F5         |
| Card        | #151E1A → #FFFFFF         |
| Hairline    | #26342E → #DCE4DF         |
| Body text   | #F4F7F5 → #101613         |
| Interaction | #20C98A → #087A56         |
| Elevation   | borders only → 1px shadow |

WHY THE EMERALD DARKENS

#20C98A on a white card reads 2.1:1 — unusable for text or a small mark. Ledger steps the same hue down to #087A56 (5.6:1) and pairs it with white, while Vault keeps the bright step against near-black ink at 9.4:1. The two are the same brand colour at the lightness each background can carry.

58

[illegible]

## WHAT THIS SCREEN IS FOR

The most-used screen in the product. Amount first at 52px, then a category grid, then the details — or one line of plain language that fills all of it.

## ANNOTATIONS

- 1 **Amount is the hero.** 52px, tabular, pause in muted ink.  
Entry starts where attention already is rather than at the top-left of a form.
- 2 **Category is a grid, not a select.** Eleven categories fit in two rows and are reachable in one tap; a dropdown would cost two interactions on the highest-frequency field.
- 3 **Quick add parses on device.** The chips show what was understood before anything is saved — the parse is reviewable, not magic.
- 4 **Budget impact is shown pre-save,** so the consequence of the entry is visible while it can still be reconsidered.

## SPEC

|                |                       |
|----------------|-----------------------|
| Amount type    | 52px / 700 / -0.045em |
| Category tile  | 12px radius           |
| Grid           | 6 columns, 9px gap    |
| Field height   | 38px                  |
| Primary action | bottom right          |

## SAME ARTBOARD, OTHER THEME

This is the identical mockup source as the preceding sheet with one class changed. Spacing, type, sizing and layout are byte-identical; only the palette resolves differently.

## WHAT CHANGES

|             |                           |
|-------------|---------------------------|
| Canvas      | #080D0B → #F5F7F5         |
| Card        | #151E1A → #FFFFFF         |
| Hairline    | #26342E → #DCE4DF         |
| Body text   | #F4F7F5 → #101613         |
| Interaction | #20C98A → #087A56         |
| Elevation   | borders only → 1px shadow |

## WHY THE EMERALD DARKENS

#20C98A on a white card reads 2.1:1 — unusable for text or a small mark. Ledger steps the same hue down to **#087A56** (5.6:1) and pairs it with white, while Vault keeps the bright step against near-black ink at 9.4:1. The two are the same brand colour at the lightness each background can carry.

WHAT THIS SCREEN IS FOR

A market story feed, generated locally. It exists to hold the layout that a real feed would occupy, and it says so on the screen rather than in a changelog.

ANNOTATIONS

- 1

**Badged in the page header.** The same warning treatment as Markets — synthesised content is never presented without its label, anywhere in the product.
- 2

**The explanation panel is part of the design.** The absence of a live feed is a deliberate consequence of the privacy contract, so the screen argues for it.

SPEC

|               |              |
|---------------|--------------|
| Story row     | ~92px        |
| Headline      | 14.5px / 600 |
| Category chip | neutral      |
| Headlines     | 12 fixed     |

Placeholder body copy. In the shipped app this feed exists to prove the layout, not to inform a decision.

Commodities

9 hours ago

Gold holds above ₹78,400 per 10g as the dollar softens

Placeholder body copy. In the shipped app this feed exists to prove the layout, not to inform a decision.

Earnings

11 hours ago

IT majors guide to mid-single-digit growth for the year

Placeholder body copy. In the shipped app this feed exists to prove the layout, not to inform a decision.

Regulation

14 hours ago

SEBI tightens disclosure norms for AIF pass-through

Placeholder body copy. In the shipped app this feed exists to prove the layout, not to inform a decision.

Generated content

Why this is synthetic

A real news feed means a request to a server, and a request from this app would carry the shape of what you hold. The product's core promise is that no such request exists — so the feed is generated locally and labelled as generated.

Twelve fixed headlines

Deterministic, offline, and badged everywhere they appear.

Categories

Monetary Policy

Currently ₹2,645.00 — 5.9% away.

Create alert

How alerts fire

Rules are evaluated when the app is open and prices change — there is no background service and no push. An armed rule with a stale price stays armed rather than firing on old data.

WHAT THIS SCREEN IS FOR

Price and weight rules, evaluated locally against the prices in your vault. Armed rules show how far the current value sits from the threshold.

ANNOTATIONS

- 1

**Distance reuses Delta.** The same component that shows a day change shows how far a rule is from firing, so one visual idea covers both.
- 2

**A weight rule has no price.** Its “current” cell renders “—” rather than borrowing an unrelated number to fill the column.
- 3

**No background service.** Rules evaluate when the app is open; the panel says so, because a user who expects a push notification and does not get one has been misled by the UI.

SPEC

4

The one warning

⚠ Holdings use synthetic lots

These positions were entered as a quantity and an average cost rather than as individual buys, so FIFO gains are approximated from a single derived lot. Import a trade file to replace them.

Import trades

WHAT THIS SCREEN IS FOR

Ten integrity checks over the vault's own data — double-entry balance, orphaned references, unpriced holdings, lot drift — each with the records it implicates.

ANNOTATIONS

1

Three levels, not two. Pass, warning, error. Collapsing warnings into errors is what teaches users to ignore a red screen.

2

A warning names its fix. The synthetic-lot warning links straight to the import flow that resolves it, instead of describing a problem and stopping.

3

Record counts are on the same sheet. “Is the data there” and “is the data sound” are one question when something looks wrong.

The one warning

Holdings use synthetic lots

These positions were entered as a quantity and an average cost rather than as individual buys, so FIFO gains are approximated from a single derived lot. Import a trade file to replace them.

Import trades

SAME ARTBOARD, OTHER THEME

This is the identical mockup source as the preceding sheet with one class changed. Spacing, type, sizing and layout are byte-identical; only the palette resolves differently.

WHAT CHANGES

|             |                           |
|-------------|---------------------------|
| Canvas      | #080D0B → #F5F7F5         |
| Card        | #151E1A → #FFFFFF         |
| Hairline    | #26342E → #DCE4DF         |
| Body text   | #F4F7F5 → #101613         |
| Interaction | #20C98A → #087A56         |
| Elevation   | borders only → 1px shadow |

WHY THE EMERALD DARKENS

#20C98A on a white card reads 2.1:1 — unusable for text or a small mark. Ledger steps the same hue down to #087A56 (5.6:1) and pairs it with white, while Vault keeps the bright step against near-black ink at 9.4:1. The two are the same brand colour at the lightness each background can carry.

66

WHAT THIS SCREEN IS FOR

Appearance, security, data and vaults — with the privacy contract stated as a panel rather than buried in a policy document.

ANNOTATIONS

- 1 Every row states its consequence. “Re-encrypts the vault key. Data is never re-written.” A settings row that only names itself makes the user guess.
- 2 Destructive actions use the danger variant — outlined, not filled. A filled red button next to a filled green one is a mis-click waiting to happen.
- 3 The privacy panel is a feature surface. It is the product's core claim, so it gets card weight on the screen where a user goes looking for it.

SPEC

|               |                        |
|---------------|------------------------|
| Toggle        | 38 × 22, 999px         |

1

How it works

Your PIN is the key

The PIN derives an AES-256 key. It is never stored, never transmitted, and cannot be recovered — which is the point. Lose it and the vault is unreadable, including to us.

Double -entry underneath

Every transaction writes balanced postings. That is why account balances, the balance sheet and net worth always agree, and why a transfer moves money without inventing income.

You supply the prices

Holdings are priced by what you enter or import. No feed is called on your behalf, because a request for your holdings is a disclosure of your holdings.

Backups are portable

An encrypted .ftos file restores into the mobile app and back. Both clients share the format, so neither can hold your data hostage.

WHAT THIS SCREEN IS FOR

How the product works and what it deliberately does not do — the four mechanisms a user has to trust, and an explicit list of the absences.

ANNOTATIONS

1 **Mechanism, not FAQ.** Four explanations of how the thing actually works beat twenty questions nobody asked.

2 **“Deliberately absent” is a list.** Naming what the product will not do is what stops each absence being read as an unfinished feature.

## SAME ARTBOARD, OTHER THEME

This is the identical mockup source as the preceding sheet with one class changed. Spacing, type, sizing and layout are byte-identical; only the palette resolves differently.

## WHAT CHANGES

|             |                           |
|-------------|---------------------------|
| Canvas      | #080D0B → #F5F7F5         |
| Card        | #151E1A → #FFFFFF         |
| Hairline    | #26342E → #DCE4DF         |
| Body text   | #F4F7F5 → #101613         |
| Interaction | #20C98A → #087A56         |
| Elevation   | borders only → 1px shadow |

## WHY THE EMERALD DARKENS

#20C98A on a white card reads 2.1:1 — unusable for text or a small mark. Ledger steps the same hue down to **#087A56** (5.6:1) and pairs it with white, while Vault keeps the bright step against near-black ink at 9.4:1. The two are the same brand colour at the lightness each background can carry.

WHAT THIS SCREEN IS FOR

The first thing a returning user sees and the last thing an attacker does. No shell, no navigation, nothing to explore — the whole app is behind this card until the PIN derives a working key.

ANNOTATIONS

- 1 The mark at 96px.** This is the one screen where the brand is the largest object; it is also the only place gold appears at size, since gold is identity and never interaction.
- 2 PIN field is 48px and 14px-radius,** larger than the 38px form input elsewhere — the only field on screen deserves the larger target.
- 3 Biometrics is secondary, not primary.** The PIN is what derives the key; the platform authenticator only releases a stored one, so the emerald sits on the PIN path.
- 4 The consequence is stated up front.** “No recovery” belongs on the setup screen, not in a support article discovered later.

SPEC

|                   |                 |
|-------------------|-----------------|
| Card width        | 384px           |
| Card padding      | 24px            |
| Mark              | 96px            |
| Wordmark tracking | 0.22em          |
| PIN field         | 48px h, 14px r  |
| Focus ring        | 3px accent-line |
| Lockout           | 5 attempts      |

Unlock

• • • •

Unlock

Use biometrics

Five wrong attempts start a cooldown. The vault stays encrypted throughout.

100% private

No server. No tracking.

Encrypted

AES-256 at rest. PIN never leaves the device.

Offline first

Works everywhere. No internet required.

SAME ARTBOARD, OTHER THEME

This is the identical mockup source as the preceding sheet with one class changed. Spacing, type, sizing and layout are byte-identical; only the palette resolves differently. The gate is also the strongest theme test: it is almost entirely surface, brand and one field.

WHAT CHANGES

|             |                           |
|-------------|---------------------------|
| Canvas      | #080D0B → #F5F7F5         |
| Card        | #151E1A → #FFFFFF         |
| Hairline    | #26342E → #DCE4DF         |
| Body text   | #F4F7F5 → #101613         |
| Interaction | #20C98A → #087A56         |
| Elevation   | borders only → 1px shadow |

WHY THE EMERALD DARKENS

#20C98A on a white card reads 2.1:1 — unusable for text or a small mark. Ledger steps the same hue down to #087A56 (5.6:1) and pairs it with white, while Vault keeps the bright step against near-black ink at 9.4:1. The two are the same brand colour at the lightness each background can carry.

PART D

# Mobile

The same product at 390 points. Seven frames printed 1:1 — the five bottom-nav destinations, the vault gate and quick add — in both themes.

- Overview
- Cash Flow
- Investments
- Score
- Settings
- Add
- Gate

| SPEC             |                    |
|------------------|--------------------|
| Viewport         | 390 × 844          |
| Bottom bar       | 62px               |
| Top bar          | 56px               |
| Page padding     | 14px 16px          |
| Card padding     | 14px               |
| Card gap         | 10–12px            |
| FAB              | 54px, 18px radius  |
| Min touch target | 48px               |
| Tab label        | 10.5px / 500       |
| Active pill      | accent-soft, 999px |

1 Five tabs, matched across clients. Overview, Cash Flow, Investments, Score, Settings — the same five as the Flutter app's bottom bar, asserted by a test so the two cannot drift.

2 The active tab gets a pill, not just a colour change: a 999px accent-soft capsule behind the glyph, with the label below in accent ink.

3 The FAB is not on every tab. It appears where creating a transaction is the obvious next action — Overview and Cash Flow — and is absent from Investments, Score and Settings.

4 The topbar loses the sidebar toggle and the search field, keeping the mark, the title and two icon actions. Search moves behind its icon.

Score ● VAULT · DARK

Settings ● VAULT · DARK

Add Transaction ● VAULT · DARK

| SPEC          |                  |
|---------------|------------------|
| Settings row  | ≥48px            |
| Category grid | 4 columns        |
| Amount        | 44px / 700       |
| Gauge         | 198px            |
| Category ring | 52px, 7px stroke |
| Modal exits   | save · back      |
| Chevron       | 15–16px lucide   |

1 Settings rows are 48px minimum, icon-led, with the current value on the right — the platform convention, because a settings list is not a place to be inventive.

2 Quick add drops to a 4-column category grid from six, and the amount steps from 52px to 44px. The hierarchy is identical; only the density changes.

3 Add Transaction has no bottom bar. It is a modal destination — the way out is Save or the back chevron, so a tab bar would offer an ambiguous third exit.

4 Score keeps the full 198px gauge. The category rows shrink to 52px rings with one metric sentence each; the twelve-metric breakdown moves behind a row tap.

Vault gate · dark    ● VAULT · DARK

SPEC

|              |                               |
|--------------|-------------------------------|
| Mark         | 84px on mobile · 96px desktop |
| Card padding | 20px · 24px desktop           |
| PIN field    | 48px h, 14px r                |
| Trust points | 3 columns, kept               |

- 1

**Already centred.** The gate is the one screen that needs no reflow between breakpoints — only the mark steps from 96px to 84px.
- 2

**The PIN field stays 48px** at every width. It is the single interactive target on the screen and the one that must never be mis-tapped.
- 3

**Trust points survive the narrow width** as three columns of two lines rather than being dropped — they are the reason a first-time user types a PIN at all.

| SPEC     |                              |
|----------|------------------------------|
| Hero     | constant ink-surface         |
| Card     | #FFFFFF on #F5F7F5           |
| Shadow   | 0 1px 2px rgba(16,22,19,.05) |
| Hairline | #DCE4DF                      |

- 1 The hero keeps its dark plate in both themes. —ink-surface is the one surface that does not invert: the net-worth figure is the focal point of the app, and giving it a constant ground is what makes the two themes feel like one product.
- 2 Cards become the brightest surface in Ledger — white on a #F5F7F5 page — which is the single step that replaces the four-level dark ladder.
- 3 Shadow appears. Vault has none; Ledger adds a 1px shadow under every card, which is what keeps the light theme from reading as flat paper.

- 1

The gauge keeps its emerald at the darker Ledger step. Because the arc sits on a white card rather than near-black, #087A56 carries it at 5.6:1 where the bright step would wash out.
- 2

Faint band arcs survive the theme change at the same 30% opacity — they read against both grounds because they are drawn from semantic tokens, not from fixed greys.
- 3

Settings icons drop to `--ink-soft`, which is #53625B in Ledger against #A0ADA7 in Vault. Both land near 5:1 on their own card.
- 4

Gold is the one constant. The tagline uses `--gold-ink`, which steps to #8E641B in Ledger purely to clear the 4.5:1 text bar — the mark itself keeps #A97922.

PART E

# UX & motion

How the twenty-eight screens fit together, the five paths that define the product, and the interaction rules — motion, states, generated copy and accessibility — that apply everywhere at once.

Information architecture

Core flows

|---------------------------------------------------------------------------|-------------------------------------------------------------------------------|--------------------------------------------------------------------------------|--------------------------------------------------------------------|--------------------------------------------------------------------------|

These five match the Flutter app's bottom bar exactly, and a test asserts the two lists stay in step. A user moving between clients should not have to relearn where things are. `/investments` keeps its path for that reason — only its label became “Portfolio”.

GROUPING IS NOT DECORATION

At twenty-plus destinations a flat list stops being scannable. The five groups answer “**what am I trying to do**” — look at it, grow it, spend it, protect it, everything else — rather than mirroring the data model, which would have put Holdings under a different heading from Portfolio.

|                      |                                |
|----------------------|--------------------------------|
| Sidebar destinations | 26                             |
| Groups               | 5                              |
| Phone tabs           | 5                              |
| Off-nav routes       | /add · / (redirect)            |
| Web-only screens     | 10                             |
| Flutter-only screens | 2 — Capture Inbox, Market data |

EVERY ROUTE IS IN THE SIDEBAR

No destination is reachable only by a link from another screen. A guarded test walks `NAV_ITEMS` against the route table, so a new page that forgets to register itself fails the build rather than becoming orphaned.

DEPTH IS TWO, EVERYWHERE

Sidebar → screen. Nothing nests a third level; where a screen needs detail it uses a segmented control, a drawer or a row expansion rather than a sub-route. The one exception is `/add`, which is modal and returns to where it was opened from.

CROSS-CLIENT PARITY

|                   |                                   |
|-------------------|-----------------------------------|
| Flutter screens   | 24                                |
| Web routes        | 28                                |
| Shared            | 18                                |
| Flutter nav       | 5 tabs · 19-item desktop sidebar  |
| Shared tokens     | colour · type · space · motion    |
| Shared algorithms | health · safety net · tax · FIFO  |
| Shared fixture    | health_cases.json, byte-identical |

Web-only: Holdings, Watchlist, Markets, Dividends, Tax Center, Reconcile, News, Alerts, Diagnostics, Help. Flutter-only: Capture Inbox (SMS review) and Market Data settings.

First run install → a vault with data in it

The gate is the only blocking step. Everything after it is skippable — a user who wants an empty vault gets one, and the demo badge appears only if they choose the sample.

Add a transaction the highest-frequency path in the product

Quick add short-circuits the middle three: “1240 swiggy food today” is parsed on device and shown as chips before anything is written. Budget impact is displayed while the entry can still be reconsidered.

Import a broker file the only bulk write path

Rejected rows are shown with a reason rather than dropped silently — a symbol missing from the instrument master would otherwise surface later as an “Unclassified” slice.

Reconcile an account proving the book is true

The app never ticks anything on the user's behalf. It narrows the search and stops — an auto-reconciled book is a book nobody has actually checked.

Lock and ghost the shoulder-surfing path

Ghost mode and lock are different tools: ghost keeps the session alive for a screen share, lock destroys the in-memory key. ⌘L is bound to the second.

ONE RULE ACROSS ALL FIVE

Nothing is written until the user confirms it. Import previews, capture drafts sit in a queue, reconcile ticks are manual, quick-add shows its parse as chips. The product never acts on an inference and reports it afterwards.

REVERSIBILITY

|               |                    |
|---------------|--------------------|
| Import        | undo, per batch    |
| Transaction   | edit or delete     |
| Capture draft | confirm or dismiss |
| Reconcile     | untick freely      |
| Sample data   | idempotent reload  |
| Erase vault   | irreversible       |
| Lost PIN      | irreversible       |

Exactly two actions cannot be undone, and both say so in the flow that reaches them rather than in a support article found afterwards.

ENTRY POINTS TO ADD

FAB on Overview and Cash Flow, the sidebar's primary button, the N shortcut, the command palette, and “Add for this day” on the calendar. Five doors to one destination is correct for the action a user takes fifty times a week.

WHAT HAS NO FLOW

There is no onboarding wizard, no account recovery, no sync setup and no notification permission prompt. Each of those is absent because the corresponding feature is absent — Part F lists them.

| WHAT            | BEHAVIOUR                       | KEYFRAME | DURATION | EASING   | NOTES                                          |
|-----------------|---------------------------------|----------|----------|----------|------------------------------------------------|
| Page entrance   | Content rises 10px and fades in | kz-rise  | 400ms    | standard | Staggered 40ms per card, capped at 6           |
| Card hover      | translateY(−2px) + shadow-2     | —        | 250ms    | standard | Opt-in via .lift; removed under reduced motion |
| Button press    | translateY(1px)                 | —        | instant  | —        | No duration — a press must feel immediate      |
| Button colour   | Background, border, ink         | —        | 150ms    | standard | Fast enough to feel attached to the cursor     |
| Focus ring      | 2px canvas + 2px accent-line    | —        | 150ms    | standard | Never suppressed, in any theme                 |
| Line chart      | stroke-dashoffset 1 → 0         | kz-draw  | 400ms    | standard | Draws left to right on mount only              |
| Bars / columns  | scaleY 0 → 1 from the baseline  | kz-grow  | 400ms    | standard | Opacity 0.4 → 1 alongside                      |
| Progress bar    | width transition                | —        | 500ms    | standard | Longer, because the value is the message       |
| Ring / gauge    | stroke-dashoffset               | —        | 600ms    | standard | The slowest thing in the product               |
| Segmented       | Background and ink swap         | —        | 150ms    | standard | The thumb does not slide — it swaps            |
| Drawer / sheet  | Slide from edge + scrim fade    | —        | 250ms    | standard | Scrim is the only place blur is used           |
| Command palette | Scale 0.98 → 1 + fade           | —        | 150ms    | standard | Fast: it is a keyboard tool                    |

HOVER

Cards lift 2px and gain a shadow. Rows tint with `—fill`. Buttons move to their hover token. Nothing scales, and nothing changes size — a layout that reflows on hover is a layout that cannot be pointed at.

FOCUS

A two-part ring: 2px of the canvas colour, then 2px of `—accent-line`. The inner ring is what keeps it legible against a card *and* against a filled button. `:focus-visible`, so a mouse click does not draw it.

PRESSED

One pixel down, no transition. Every other state animates; this one must not, because a delayed press response is the single clearest way to make an interface feel broken.

REDUCED MOTION

Under `prefers-reduced-motion`: reduce every animation and transition drops to 0.001ms, iteration count is forced to 1, smooth scrolling is disabled, and the hover lift is removed rather than shortened. Charts render at their final state immediately — the information was never in the animation.

KEYBOARD

|                 |                 |
|-----------------|-----------------|
| Command palette | ⌘K / Ctrl K     |
| New transaction | N               |
| Lock vault      | ⌘L / Ctrl L     |
| Focus search    | /               |
| Dismiss         | Esc             |
| Move focus      | Tab / Shift Tab |
| Activate        | Enter / Space   |

FEEDBACK SURFACES

Banners persist in the layout. Confirms are modal and name the consequence in the button (“Erase vault”, not “OK”). There are no toasts — nothing that matters in this product is announced by something that disappears on a timer.

LOADING

Local reads finish in single-digit milliseconds, so there are no skeletons on ordinary navigation. The three places that can genuinely wait — unlock, import parse, sample-data load — show a determinate state with a label, never an indefinite spinner.

WHY ONE CURVE

A second easing curve buys nothing a reader can name and costs consistency across two clients. `cubic-bezier(0.4, 0, 0.2, 1)` is quick to leave and slow to settle, which suits every transition in the product.

EVERY SCREEN HAS SIX STATES

| STATE     | TREATMENT                                                 | WHERE IT COMES FROM                              |
|-----------|-----------------------------------------------------------|--------------------------------------------------|
| Populated | The artboards in Part C                                   | Vault has records                                |
| Empty     | EmptyState — icon plate, one line, one action             | New vault, or a filter with no matches           |
| Partial   | Missing values render “—”, never 0; counts state coverage | Unpriced holdings, untracked cover               |
| Loading   | Determinate label; no indefinite spinner                  | Unlock, import parse, sample load                |
| Error     | Danger banner in the layout, with the recovery action     | Insecure context, restore failure, parse failure |
| Ghost     | Every figure masked as •••••; layout unchanged            | User toggle, for a shared screen                 |

UNTRACKED IS NOT ZERO

WRONG

HOME COVER

PROTECTION SCORE

₹047

Asserts a factPunishes a gap in knowledge

This is the single most load-bearing display rule in the product. A vault that has not been told about a policy is not a vault with no policy, and a score that treats the two the same is lying with a number.

GENERATED COPY IS CONSTRAINED

Narrative sentences are filtered through a banned-phrase list before they can render, and every insight surface closes with the disclaimer:

buy sell invest in recommend you should guaranteed consider prioritise

“Informational only — not investment advice.” The rule is enforced at the render layer, not in review, because copy written months apart drifts and a compliance boundary that depends on memory is not a boundary.

ACCESSIBILITY

|                       |                               |
|-----------------------|-------------------------------|
| Body contrast, Vault  | #F4F7F5 on #151E1A — 14.8:1   |
| Body contrast, Ledger | #101613 on #FFFFFF — 17.6:1   |
| Secondary ink         | ≥ 5:1 both themes             |
| Muted ink             | ≥ 4.5:1 both themes           |
| Emerald on card       | 9.4:1 Vault · 5.6:1 Ledger    |
| Gold as text          | uses - - gold - ink, ≥ 5:1    |
| Chart marks           | all ≥ 3:1 on both grounds     |
| Min touch target      | 48px                          |
| Focus indicator       | always visible, never removed |

COLOUR IS NEVER ALONE

Deltas carry an arrow. Amounts carry a sign. Diverging bars carry a centre rule. Chart slices carry a legend. Status carries a labelled chip. Every one of these would survive being printed in greyscale — which this document, on a monochrome printer, actually tests.

SCREEN READERS

Figures expose a spelled-out form via moneyToWords in Indian numbering — “two crore forty-one lakh...” — because a screen reader given ₹2,41,38,144 reads a digit sequence, not a quantity. Charts carry a text summary; decorative SVG is aria-hidden.

NOT YET VERIFIED

The contrast figures above are computed from the token pairs. A full assistive-technology pass — VoiceOver and NVDA against the live build, keyboard-only traversal of all 28 routes — has not been run, and this document does not claim it has.

PART F

# Appendix

The demo vault printed as reference data, the map from screen to domain module, the three frozen contracts, and an explicit list of what this product does not do.

ROLL-UPS MUST RECONCILE

A roll-up along **any** dimension — asset group, sector, industry, market cap, currency — must sum exactly to the portfolio total. It is the invariant that makes every allocation chart in the product trustworthy.

|            |              |
|------------|--------------|
| Equity     | ₹2,24,22,924 |
| Debt       | ₹6,63,300    |
| Gold       | ₹6,15,440    |
| Retirement | ₹4,36,480    |
| Sum        | ₹2,41,38,144 |
| Portfolio  | ₹2,41,38,144 |

COVERAGE BY DESIGN

The demo vault is not a random sample. Every equity symbol exists in `public/instrument_master.json`, or every sector and market-cap roll-up would render “Unclassified” and the allocation screens would look broken. The four non-equity sleeves exist so the asset-group donut has more than one arc, and three positions are deliberately underwater so the loss states are exercised.

|                                                                  |            |              | Document Date                                                                                                                                                                                           |          |         |        |                     |               |            |             |
|                                                                  |            |              | Every relative date in this document resolves against a pinned <b>09 Aug 2026</b> , so rebuilding it produces the same figures. The app itself dates the sample vault relative to the day it is loaded. |          |         |        |                     |               |            |             |

FROZEN CONTRACTS

Three strings cannot change without breaking existing installs or the cross-client backup format. None of them is brand, and none should be “tidied”.

| WHAT             | VALUE      | WHY                                   |
|------------------|------------|---------------------------------------|
| Vault verifier   | FT0S–0K    | Proves a PIN decrypted correctly      |
| Database name    | fintech_os | Renaming orphans every existing vault |
| Backup extension | .ftos      | Paired with the Flutter backup magic  |

DELIBERATELY EMPTY DATA FILES

| FILE                           | WHY                                                                                                      |
|--------------------------------|----------------------------------------------------------------------------------------------------------|
| benchmarks.json → series       | Index close series need licensed data; an invented one would make benchmark comparison confidently wrong |
| fund_portfolios.json → schemes | MF look-through needs real AMC disclosures, so overlap analysis is disabled rather than faked            |

THE ONE DATA DISCREPANCY

sampleData.ts backfills ninety days of history ending at a hardcoded ₹5.24 Cr, but the holdings and accounts it seeds compute to ₹2.19Cr. The ledger is right and the backfill is decorative. This document uses the computed figure everywhere and scales the snapshot curve onto it, preserving its shape. It is exactly the class of inconsistency the Diagnostics screen exists to surface — and worth fixing in the seed.

DELIBERATELY ABSENT

Each of these is a decision, not a gap. Reading them as a backlog is the most likely way to misuse this document.

Account or sign-in

There is no server to hold one

Cloud sync service

Backup files move between devices instead

Live market feed

A price request discloses a holding

Push notifications

Would require a server and a device token

Advice or recommendations

Enforced by the banned-phrases list

Analytics or crash reporting

No network calls at all

Password recovery

The PIN is the key; recovery would mean escrow

Realised P&L on web

Needs the Flutter trade ledger — unrealised only here

MF overlap analysis

Disabled until real AMC disclosures exist

Benchmark comparison

Disabled until licensed index data exists

CAVEATS ON THIS DOCUMENT

The artboards are **redrawn from tokens**, not screenshots of the running build. They are accurate to the design system and to the demo data; where a shipped screen has drifted from its tokens, this document shows the intent rather than the drift.

It specifies the **web client**. The Flutter app shares the tokens, the algorithms and the five-tab bar, but its desktop sidebar carries 19 items in four sections and it has two screens the web build does not.

Contrast figures in Part E are computed from token pairs. **No assistive-technology pass has been run** against the live build, and this document does not claim one.
